## Ad-hoc communication under §15 WpHG (German Securities Trading Act)

### **OpenLimit Holding AG: assignment for the development and provision of a connector by T-Systems for the “Gesellschaft für Telematikanwendungen der Gesundheitskarte” or “gematik” (Society for Telematic Applications of the Health Insurance Card)**

(Baar, 03 December 2013) - OpenLimit SignCubes AG, a fully-owned subsidiary of OpenLimit Holding AG, was commissioned as subcontractor by T-Systems International with the development and provision of a connector for the gematik project “Erprobung Online-Rollout - Stufe 1” (Online Rollout Trial - Stage 1).

As part of the introduction of the electronic health insurance card (abbreviated to “eGK” in German), taking place in accordance with § 291a SGB V (German Social Act), an interoperable information, communication and security infrastructure is being established as a nationwide “health telematics system” within the German healthcare system. For this purpose, the development, setting up and operation of the telematics infrastructure is being piloted in two test regions with a defined functional scope that includes all stakeholders (doctors, dentists, psychotherapists, hospitals and their administration departments, insured parties, health insurers and their service providers). This project is one of the lighthouse projects of the German federal government being undertaken within the context of the implementation of the eCard strategy with the health insurance card. After successful conclusion of the tests on the telematics infrastructure in two regions, it is planned to set up this structure throughout Germany.

T-Systems was commissioned as general contractor with the setting up of a test region, and chose OpenLimit to for the development and manufacture of the connector (hardware and software). The main role of the connector is to achieve a secure connection between the local systems of the different stakeholders within the healthcare system and the centralized telematics infrastructure. The electronic health insurance card (“elektronische Gesundheitskarte” or “eGK” in German), the electronic health professional card (“Heilberufsausweis” or “HBA” in German) and security module cards (SMC) all serve as authentication media. Since the security and reliability of the connector have a considerable influence on the security of the telematics infrastructure, connectors must go through a corresponding approval procedure which, along with practical testing, also includes security testing and certification.

For realization of the project, OpenLimit SignCubes AG can draw on its extensive know-how and existing technologies, while it can rely on partner Power Plus Communications AG when it comes to hardware manufacture. The task of realizing the project was determined by gematik to take 80 weeks. The order value for the services offered by OpenLimit SignCubes AG lies in the solid 7-digit EUR range. Revenues will begin to be realized after defined project milestones have been achieved. The parties have agreed not to disclose information on other commercial aspects of the project.

### **About OpenLimit**

OpenLimit Holding AG is listed on the stock exchange (symbol: 05H). Its headquarters are in Baar, Switzerland while it has a subsidiary and operating subsidiary in Berlin, Germany. The group employs over 60 highly qualified staff.

OpenLimit stands for the secure electronic handshake. With our technologies, we allow people and machines worldwide to communicate in ways that are secure, provable and identifiable. We develop enabling technologies and products in the following areas: electronic identities, electronic signatures, evidentiary value-preserving long-term storage of data and documents as well as secure data communication between machines. Our technologies are an integral component of products from leading manufacturers of IT applications for public authorities and private businesses, products which have an impact on the individual. In order to position our technologies in different applications and vertical markets, we endeavor to enter into strategic development and sales partnerships with other companies.
