Press Release

File documents permanently and legally compliant

Baar, September 2nd, 2008

OpenLimit presents innovative archiving technology at the DMS Expo 2008

(Baar/Bonn, September 2nd, 2008) From September 9-11, 2008 OpenLimit together with PDF Tools AG presents modern document and archiving technology. The new archiving middleware doesn't compete with applied and approved procedures and systems. It rather has to be seen as a supplement based on open standards that allows a consistent, easy and cost-efficient process from the creation of a document to its revision-proof long-term archiving.

Revision-proof archiving

By implementing the innovative archiving middleware you can store your electronic documents permanently, complete and tamper-proof. Therefore auditors cannot carp about your data management. The new OpenLimit software has been developed according to the "ArchiSafe" specification of the German Physikalisch-technische Bundesanstalt (PTB), the national metrology institute providing scientific and technical services. Furthermore the new development meets all international requirements of data management. Documents are embedded in a XML container thus you can still read them in thirty years.

Well-structured filing saves costs and guarantees information retrieval

With the OpenLimit archiving middleware users move electronic documents together with corresponding meta data and the digital signature from their application to a cost-efficient storage medium suitable for long-term archiving. Thereby users discharge their cost-intensive DAS or SAN storage systems and optimize their archiving processes. Stored files receive an identification number and can be easily located even in big storage volumes.

Meets all requirements of an innovative archiving system

The new OpenLimit archiving middleware is multi-client enabled, freely scalable and fast. User and signature data formats interpreted by the solution are unambiguous. And as usual, concerning OpenLimit products, the applied algorithms and electronic signatures have the highest security level.

About OpenLimit:

OpenLimit is an internationally leading provider of certified electronic identity and signature solutions. The components of the solution can be easily integrated into existing applications and allow a highly efficient document management, workflows without discontinuity of media and process optimization for all business areas. OpenLimit holds the very first certification recognizing world-wide compliance with the international security standard Common Criteria EAL 4+ guaranteeing the highest degree of security and legal validity currently available.
